

EnergyLock

THE SMART
PATH TO SOLAR

EnergyLock is a prepaid solar lease designed for the realities of the 2026 energy market. Instead of taking out a complex bank loan or swapping your utility bill for a monthly solar payment, you pay a single, highly discounted upfront amount. You secure 25 years of clean, top-tier energy production with no mandatory monthly payments or hidden interest rates.

HOW IT WORKS

1

We Apply the Discount Upfront

All Energy Solar uses commercial tax incentives behind the scenes and instantly applies them to your project. You get a price similar to a cash purchase.

2

We Install Premium Hardware

Your system is built exclusively with the industry's highest-quality panels and inverters, never the outdated, cheap equipment competitors use to cut costs.

3

You Lock In Your Power

Your system is activated and your electricity rate is locked in for 25 years with a monthly solar payment of exactly \$0.

WHAT YOU GET

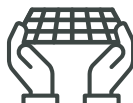

Zero Monthly Payments: Enjoy the financial benefits of solar without adding a new recurring bill to your budget.

Worry-Free Maintenance: As long as we own the system, we handle the maintenance, insurance, and ongoing monitoring.

Guaranteed Production: We guarantee your system will produce at least 80% of its estimated output, or protections kick in.

Flexible Ownership: Want to own it outright? You have the option to take full ownership after year 6 at no additional cost.

Simple Transferability: If you move, the prepaid lease transfers seamlessly to the new homeowner with no monthly payments to assume.

NO SURPRISES. JUST SAVINGS.

Historical data shows residential electricity costs are always rising. With EnergyLock, your rate remains completely flat to permanently shield your budget.*

* Source: U.S. Energy Information Administration (EIA) Residential Electricity Price Data. Assumes a monthly utility bill of \$150 and a 4% annual increase.
